Welch-Allyn Video Otoscope
Recommended Procedures for Telemedicine Use

1. Turn **ON** the power using the switch on the front of the lightbase for the scope.
2. Choose the **AUX** video input on the Tandberg remote.
3. Choose **SELFVIEW** on the Tandberg remote.
4. Disconnect both cables from the camera and clean all parts with DUSTER.
   Use the lens cloth or lens tissue to wipe the lens of the camera *in the end of the cable. Use an alcohol wipe to clean the long tube of the instrument and blow off the tip with DUSTER. Reassemble the camera and tighten all connections.
5. Wait at least 30 seconds for the lamp to warm-up and then white balance the camera:
   a).point the tip of the scope at a blank piece of white paper and hold approximately 1.5cm away.
   b).Press and hold the Color Reset button until you see the light stop flashing.
6. Check the orientation of the camera and cable. You should see a white dot on the top of the camera cable or the camera will not be right-side-up.
7. Cover the tip of the scope with a clean, disposable speculum cover.
8. Cup your hand over the tip of the scope to focus and confirm that there is a picture.
   Using the wing-type mechanism focus the camera app. ¼” away from the DUSTER can until you see the highest quality image possible. Text close to the center of the field should be crisp.
9. Position yourself and the patient so that you have a clear view of the monitor.
10. Position the otoscope as needed. Be aware of light reflections – you may need to adjust the angle of the scope.
11. Adjust the illumination/amount of light as necessary by turning the ring on the front of the lightbase.
12. Attach and use the insulflator bulb if needed.
13. Before doing the other ear:
   *check and tighten all connections
   *blow out/wipe off any lint or earwax
   *be sure to change the speculum cover
